Innovation and future challenges in Science and Technology.

Science is the intellectual and practical activity encompassing the systematic study of the structure and behaviour of the physical and natural world through observation and experiment. We can also say that Science is an accumulated body of knowledge and skills concerned with nature, learning and understanding.

Technology is also defined as the cumulative understanding of science and applied in the exploration of environmental resource through processes of instrumentation, manipulation and production.

Science and technological studies is the study of how society, politics, and culture affects scientific research and technological innovation, and how these, in turn, affect society, politics and culture.

The challenges facing Science and Technology:

- ❖ Security.
- ❖ Lack of infrastructure of database.
- ❖ Lack of adequate research studies.
- ❖ Political instability.
- ❖ Budgetary allocations.
- ❖ Government policy.
- ❖ Lack of skilled manpower.
