REPORT

Department of BCA has conducted the TED TALK on CYBER CRIMES and SECURITY for BCA all sem students to bring awareness about Cyber Crimes and Security.

In the video the "AVI RUBIN" has explained about the cyber crimes as follows

Hacking - Involves gaining access to someone's computer network without their permission and then taking control, and/or taking information from an organisation, agency or individual. Basic examples may include accessing a secure area on a school's computer network to look for test paper answers or trying to change test scores.

- **Malicious software** - making, supplying, or obtaining malware, viruses, spyware, botnets, and Remote Access Trojans (RATs) is a criminal activity. These programmes allow cybercriminals to get into other people's computers without their permission. "Pranking", by remotely accessing a friend's computer without their knowledge and messing around with it, is illegal.
- **DDoS** - a Distributed Denial of Service (DDoS) attack, or 'booting', consists of sending a large amount of internet traffic towards a website to stop somebody or anybody from accessing it. Booting someone offline whilst playing online games may seem like a harmless joke, it may be challenging and entertaining - but it is illegal.

WHAT CAN GO WRONG?

A permanent criminal record could affect education and future career prospects, as well as potential future overseas travel.

Consequences vary from country to country, but young people who get involved in cybercrime could face the following:

- A visit and a warning from the police, as well as a penalty fine
- Arrest and a prison sentence for serious offences
- Their computers being seized and/or being prevented from accessing the internet

contd. .

ADVICE FOR PARENTS

Given the past years' fast technological progress, is it quite common for children to easily become tech-savvy. However, they still need your help and guidance to make sure that they stay on the right path. Unfortunately, their talent could be exploited by cybercriminals rather than put to good use in the world of cybersecurity. Once they are on the radar of law enforcement, their professional and educational futures might be compromised. Cybersecurity companies tend to avoid hiring convicted hackers, regardless of how talented and tech-savvy they might be.

WARNING SIGNS

Some of the indicators that your child may be at risk of becoming involved in cybercrime include:

- They spend most of their time online and are often secretive about their activities;
- They are excessively interested in coding;
- They seem to gain an additional income from their online activities, but they do not talk about how they do it;
- Your home network's monthly data allowance is often met;
- They socialize more in the online world than offline
