DEPARTMENT OF CHEMISTRY

Guest Lecture 2019-20

By

Dr.Swastika N. Das

Professor & Head,

Dept.of Engineering Chemistry

BLDEA's College of Engineering & Technology, Vijayapur

For

B.Sc. Students

VENUE

Seminar Hall,

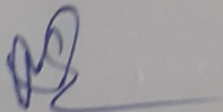

S.B.Arts and K.C.P.Science college

Vijayapur.

Notice

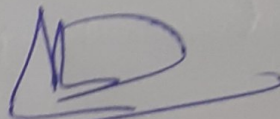

Date:17/08/19

All the B.Sc I semester students are hereby informed to attend the guest lecture organised by Department of Chemistry on the Topic: Waste management: Best practice of Human life on 21/08/2019 in seminar hall at 04:00 pm to 05:00pm.

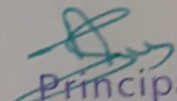

Head

Dept. of Chemistry
SB Arts & KCP Sc. College,

VIJAYAPUR

Dr. Swastika N. Das, Professor & Head, Department of Engineering Chemistry, BLDEA's College of Engineering & Technology, Vijayapur has given guest lecture on Waste management: Best practice of Human life. Highlights of the lecture are as follows-

Introduction of the guest.

Waste Management: Best Practice of Human Life

DR. SWASTIKA DAS

Professor of Chemistry

INDRAPATI UNIVERSITY

What are Wastes?

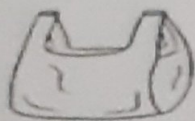

- Waste (also known as **rubbish, trash, refuse, garbage, junk, litter**) is unwanted or useless materials. In biology, waste is any of the many unwanted substances or toxins that are expelled from living organisms, metabolic waste; such as urea and sweat.

• *Basel Convention Definition of Wastes*

“Substances or objects which are disposed of or are intended to be disposed of or are required to be disposed of by the provisions of the law”

- Disposal means, “any operation which may lead to resource recovery, recycling, reclamation, direct re-use or alternative uses (Annex IVB of the Basel convention)”

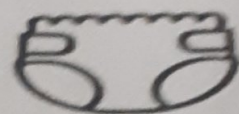

How long does it take to decompose?

Plastic
10-1000 years

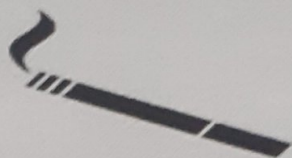

Styrofoam
50 years

Diapers
450 years

Glass
450 years

Cigarette butts
1-5 years

Aluminum can
200-500 years

**Do your bit to stop
POLLUTION.**

Toxic Components in Computers

- The central processing unit in a computer contains toxic substances, and **lead** is found in circuit boards.
- Metal plates and housings may contain **chromium**, which is used to harden and protect metal plates from corrosion.
- Motherboards and connectors often contain **beryllium**. **Cadmium** is commonly found in chip resistors, semi-conductors, infrared detectors, stabilizers, cables and wires.
- Circuit boards, switches and relays contain **mercury** as well chromium.
- **Brominated flame** retardants are used in many components, including circuit boards and plastic casings.

BECOME AN ENTREPRENEUR BY RECYCLING

- Here are the simple recycling which can be done on day to day basis:
- Waste papers can be recycled to make cardboard packaging materials, drawing sheets, writing pads etc.
- Solid wastes which are lying on landfills generate methane gas which can be converted into electricity.
- Bio fertilizers can be produced from agricultural wastes by composting and vermicomposting.
- Coal palettes can be made from agro-industrial waste products. These are called bio coals.
- Ethanol can be produced from agricultural waste and mixed with petrol to run vehicles.
- Vegetable wastes and cow dungs can be used to produce bio gas to cook food and lighting houses.

➤ Synthesis of small molecules like ammonia

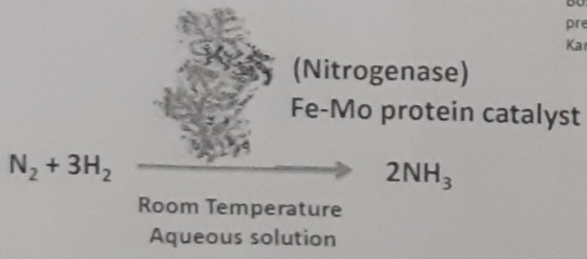

Fritz Haber Nobel Prize in 1919
Carl Bosch Nobel Prize in 1931

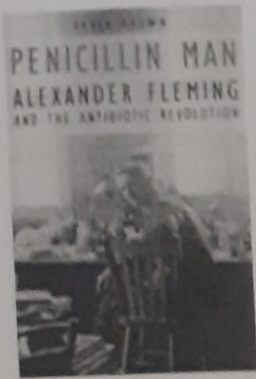

Haber Bosch Process

A historical (1921) high-pressure steel reactor for production of ammonia via Bosch-Haber process on the premises of the University Karlsruhe, Germany.

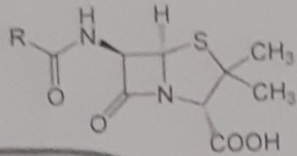

➤ Role of biomolecules in living organisms

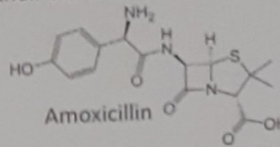

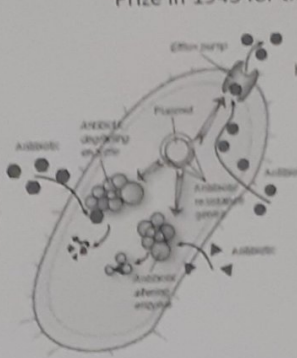

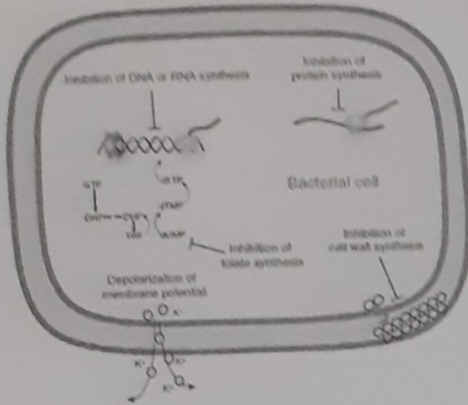

Antibiotics: Penicillin

Sometimes, a molecule comes along that changes the whole world. One such molecule is penicillin - the antibiotic that has saved countless lives since it was discovered accidentally. Let's know more.

The discovery of penicillin is attributed to Scottish scientist and Nobel laureate Alexander Fleming in 1928.

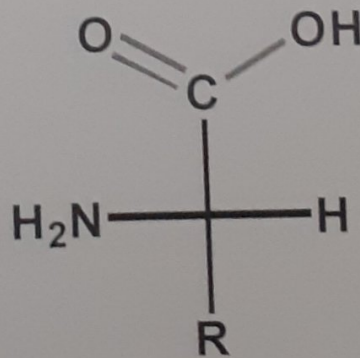

Fleming, Florey and Chain shared a Nobel Prize in 1945 for their work on penicillin.

➤ Proteins/ Peptides structure and synthesis

Amino acids have the general structure:

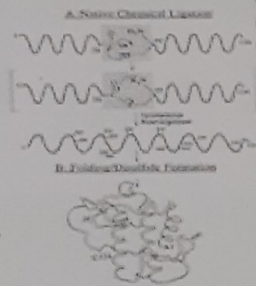

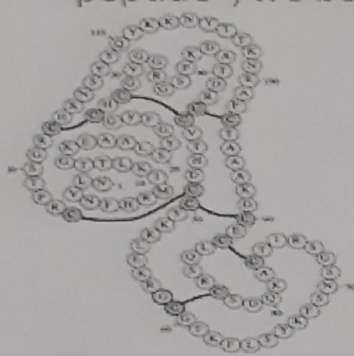

- The correct Fischer projection for naturally-occurring amino acids is shown here.

- The *R* group is variable.

Peptides and Proteins

- When a peptide grows to a length of about 70 amino acid units (molecular weight = approximately 10,000), the molecule begins to coil onto itself and assume a particular conformation (in common "shape") *secondary structure*
- At this point, we no longer refer to the molecule as a "peptide"; we begin to call it a "protein"

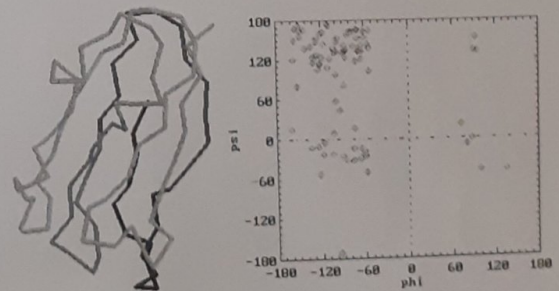

1-NLVNFHRMIKLTGKEAALS YGFYGC HCGV
 31-GGRGSPKDATDRCCVTHDCCYKRLEKRGCG
 61-TKFLSYKFSNSGSRITCAKQDSCR5QLCEC
 91-DKAAATCFARNKTTYNKKYQ
 YYSNKHCRGSTPRC

Sequence of human type II secretory phospholipase A2

Ramachandran plot of beta sheet

Types of protein secondary structures

- Helices (α -helix)
- Strands (β -strand)
- Turns
- Random coils

Repetitive values in the region of $\phi = -110$ to -140 and $\psi = +110$ to $+135$ give extended chains with conformations that allow interactions between closely folded parallel segments (beta sheet structures).

Ramachandran plot shows a broad range of values in the $-110, +130$ region. The structure of plastocyanin is composed mostly of beta sheets

Lecture by Prof. Suresh babu.

Speaker : Dr.Suresh Babu
