

**B.L.D.E. Association's**

**S.B.Arts and K.C.P. Science College**

**Vijayapur.**

**DEPARTMENT OF CHEMISTRY (UG)**

**TED TALK REPORT 2018-19**

**Topic: Motivation Speech and Chemistry Experiments**

**For**

**B.Sc. Semester Students**

**Date: 18 AUGUST 2018**

**Time: 3-4pm**

**VENUE**

**Seminar Hall,**

**S.B.Arts and K.C.P. Science college**

***B.L.D.E. Association's***

***S.B. Arts and K.C.P. Science College, Vijayapur-586103***

***Department of Chemistry***

**NOTICE**

It is here by informed to B.Sc Chemistry Students that the

**TED TALK is arranged on 18/08/2018 at 3 to 4pm attend without fail in**

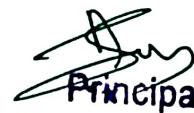

**saminar hall.**

**Head**  
**Dept. of Chemistry**  
**SB Arts & KCP Sc. College,**

# REPORT

## MOTIVATIONAL SPEECH

Motivation is a strong tool that helps to get ahead in life. For being motivated we need a driving tool or goal that keeps us motivated and moves forward. Also, it helps in being progressive both physically and mentally.

Moreover, your goal does not be too big and long term they can be small and empowering. Furthermore, you need the right mindset to be motivated.

Besides, you need to push your self towards your goal no one other than you can push your limit. Also, you should be willing to leave your comfort zone because your true potential is going to reveal when you leave your comfort zone.

Motivation is very important for the overall development of the personality and mind of the people. It also puts a person in action and in a competitive state. Furthermore, it improves efficiency and desire to achieve the goal. It leads to stability and improvement in work.

Above all, it satisfies a person's needs and to achieve his/her goal. It helps the person to fight his negative attitude. The person also tries to come out of his/her comfort zone so that she/ he can achieve the goal.

# REPORT

## CHEMISTRY EXPERIMENTS

The color of chemicals is a physical property of chemicals that in most cases comes from the excitation of electrons due to an absorption of energy performed by the chemical. What is seen by the eye is not the color absorbed, but the complementary color from the removal of the absorbed wavelengths. This spectral perspective was first noted in atomic spectroscopy.

The study of chemical structure by means of energy absorption and release is generally referred to as spectroscopy.

Color change chemistry experiments are interesting, visually appealing, and illustrate a wide range of chemical processes. These chemical reactions are visible examples of chemical changes in matter.

For example, color change experiments can show oxidation reduction, pH changes, temperatures changes, exothermic and endothermic reactions, stoichiometry, and other important concepts.
