

### *Hyophorbe indica*

#### Scientific classification

Kingdom : Plantae

Clade : Angiosperms

Clade : Monocots

Order : Arecales

Family : Arecaceae

Genus : *Hyophorbe*

Species : *H. indica*

*H. indica*

#### Description

The trunk of the tree is slender and is about 10 metres (33 ft) in height. It resembles the related *Hyophorbe amaricaulis* and *Hyophorbe vauhanii*, but with an inflorescence that branches in four (rather than three) orders, and orange-red fruits. The palm comes in 2 colours: The green one grows in the east coast of the Réunion, while the red one is endemic to [Tampon](#) region.
