BODY DONATION CAMP

KALPAVRUKSHA AND S.B.ARTS AND K.C.P.SCIENCE COLLEGE VIJAYAPUR
SUCCESSFULLY CONDUCTED BODY AND ORGAN DONATION CAMP
FROM SATURDAY 3rd TO 5th NOVEMBER, 2018

KALPAVRUKSHA AND S.B.ARTS AND K.C.P.SCIENCE COLLEGE VIJAYAPUR organized GIVE THE GIFT OF LIFE, an 'Inclusive Blood and Organ Donation Camp' at its Centre in Vijayapur from 3rd to 5th November 2018 9:00 AM to 8.00 PM. The enthusiastic team created posters and banners with slogans like 'Donate and give the gift of life', 'Leave a legacy of life', 'Loss of one life could be the beginning of another', 'Live Twice' and displayed them at prominent places in and around Vijayapur, in order to achieve active participation. Registration forms were being distributed among the staff members, supporters, and others associated with Kalpavruksha and our college staff who planned to get together for this noble cause.

Body donation, anatomical donation, or body bequest is the donation of a whole body after death for research and education. Donated bodies are mostly used for medical education and research. They are used for gross anatomy, surgical anatomy and for furthering medical education. For years, only medical schools accepted bodies for donation, but now private programs also accept donors. Depending on the program's need for body donation, some programs accept donors with different specifications.

Body donation is important for understanding the human body and for making advancements in science. There is usually no cost to donate a body to science; donation programs will often provide a stipend and/or cover the cost of cremation or burial once a donated cadaver has served its purpose and is returned to the family for interment.

Any person wishing to donate their body may do so through a willed body program. The donor may be required, but not always, to make prior arrangements with the local medical school, university, or body donation program before death. Individuals may request a consent form, and will be supplied information about policies and procedures that will take place after the potential donor is deceased.

Anatomical donation is still relatively rare, and in attempts to increase these donations, many countries have instituted programs and regulations surrounding the donation of cadavers or body parts. For example, in some states within the United States and for academic-based programs, a person must make the decision to donate their remains themselves prior to death; the decision cannot be made by a power of attorney. If a person decides not to donate their whole body, or they are

unable to, there are other forms of donation via which one can contribute their body to science after death, such as organ donation and tissue donation.
