

Dieffenbachia amoena

Scientific classification

Kingdom : Plantae
Clade : Angiosperms
Order : Alismatales
Family : Araceae
Genus : *Dieffenbachia*
Species : *D.amoena*

Description

Dieffenbachia amoena (dumbcane) is a monocot which is commonly cultivated as a houseplant, for its decorative leaves. It is a herbaceous plant with straight, thick succulent stems. It is a very popular and hardy shade-loving plant. Its leaves are large, oblong, and cream or light yellow with deep green spots and stripes in bands along the veins and border. *Dieffenbachia amoena* can be propagated by tip and nodal cuttings. It can attain a height of 6 feet in favourable condition.

Uses

It Improves Indoor Air Quality. Best CO2 Absorbing Plant.
