TED TALK REPORT

Ted talk was conducted by in PG Dept of Chemistry on 19/10/2019 for M.Sc. Ist and IIIrd semester students regarding the various organic named reactions & their mechanisms. Today, named chemical reactions play a crucial role in organic synthesis, which continues to grow in its ability to construct ever more complex and diverse chemical molecules. In 1870, A. Lieben studied the reaction of many carbonyl compounds with iodine and alkali, and postulated rules that formed the basis for the iodoform test. Before spectroscopic methods became widely available for structural identification, the iodoform test helped identify the structure of many organic molecules. To this day, many new chemical reactions are being reported and named after their discoverers in recognition of their valuable contribution to synthetic organic chemistry. Dr. S.D. lamani, Dr. M.B.Karekal, Dr.S.N.Unki and Dr.P.K.Metri have explained the facts of experiments thoroughly. Students of PG Dept of chemistry have interacted with the faculty member and clarified their doubt regarding the different experiments.
