BCA Students  
2019-20**

**Guest Lecture**

**Mr. Parashuram Rathod**

*Contd...*

## A Report On "BUILDING CULTURE TOWARDS CORPORATE"

The guest lecture was organized by BLDEA's S B Arts and K C P Science College, Vijayapur BCA Department, topic was "BUILDING CULTURE TOWARDS CORPORATE " on 24<sup>th</sup> December 2019 at 1.30 pm to 3.00 pm in L.H.No 2 . The resource person was **Mr.Parashuram Rathod, Senior Architect from Cognizant Pvt. Ltd., Pune.**

The guest lecture was commenced with BUILDING CULTURE TOWARDS CORPORATE. He explained that "Academia and Industry are two different worlds which operate on different pedestals. Both have different purposes and different ideologies. However, the rapid pace of change in the outside environment is compelling these two different worlds to come together to address and solve some of the real-world challenges.

He also expressed that where are we going wrong and what can be done to tackle this challenge? One of the approaches to tackle the problem of lacking skill and job readiness is partnerships between the industry and academia. While predicting the nature of jobs that would be available in the future is difficult, the efforts to prepare people for the jobs should continue.

Though educational institutions are training millions of youngsters yet corporate are often complaining that they are not getting the necessary skill and talent required for a job. Not only have they lowered their hiring standards in order to be fully staffed, they are also conducting training programs to make their hires productive and up to speed.

This is not a computer science skill, but this is one of the most important skills that computer science students are missing. You must treat presentation as equally important, or more important than your program, design, and algorithms. And you must spend as much time

learning presentation (from books, in classes, and in practice) as you spent on programming languages, and computer science subjects. I'm sure you haven't done that, hence this item in my list. Apart from computer fundamentals like algorithms etc. which are of course required)

1. **Learning ability:** As you have rightly said, technology will keep evolving in unforeseen directions. So 'learning to learn' is a key skill.
2. **Adaptability** to new thoughts & ideas.
3. **Reading & comprehension:** These basic skills are ignored many times, but are crucial in many ways.. Ability to listen, read, understand & analyze are so fundamental to the software engineering process.
4. **Writing/expression:** Programming or design requires clarity of thought & expression. If you can't express your thoughts simply & clearly, chances are it reflects in your code & vice versa.
5. **Width of knowledge:** (as against only depth in chosen domain)
