Mammalian fauna

1. Squirrel (*Fanambulus palmarum*):

These are found all over the world except in Australia and islands of Madagascar. Body is elongated and covered with fur. Five longitudinal stripes of dark colour are present on the back. Tail is long and bushy. The eyes and pinnae are large. The fore limbs have an inconspicuous thumb and hind limbs have four clawed digits. It is arboreal and active climber. Feeds on nuts, seeds and fruits. Diurnal and builds nests of twigs and leaves.

CONCLUSION: -

From this visit we gained a lot of information about avian, mammalian fauna around Bhutnal tank area. We could know about their conditions, habits and their natural habitats. If my opinion is asked, I can say, such visits are must to gain knowledge about fauna in their original habitat.

I am very much thankful to our teachers of Zoology Department Who organized this visit and accompanied with us, gave a lot of information about birds and mammals and cleared our various doubts.

I am also thankful to my friends for making this study tour a pleasant and grand success.

9. Water Bath:

A water bath is laboratory equipment made from a container filled with heated water. It is used to incubate samples in water at a constant temperature over a long period of time. All water baths have a digital or an analogue interface to allow users to set a desired temperature.

Applications of Water Baths

- Water baths are excellent examples of water's ability to retain heat for a long time. Water baths are used in an array of situations. Some of their applications include:
- Warming Reagents / Routine Laboratory applications
- Coliform Determinations
- Sample Thawing
- Bacteriological Examinations
- Microbiological Assays / Cell cultivation
- Material / corrosion tests
- Water baths are used in diverse fields for various purposes. Some of the industries where they are used frequently are:
