BAYAS NEST

The Baya weavers nest hangs to the branches of thorny trees and look like an upside down flask. The general features are a central nesting area with a long tube that leads to a side entrance. This tube makes it difficult even for snakes to enter the nest. The nest lasts well through the 3months breeding season, sometimes even up to a year. The nests are made entirely out of stripes of grass. The males try to attract female by building several nests halfway. These half built male nests look like motorcycle helmet, complete with chin strap. Once a female chooses to mate with him, he might finish the nest. But often the female completes the nest. When the female lays and is preoccupied with incubating the eggs, the male abandons her and immediately uses his other half finished nests to woo a new female. 3-4 white eggs are laid and the nestling are fed insect.
