REPORT

Department of Physics and Electronics organized a TED-TALK for B.Sc. students on the topic "Nanotechnology is not simply about making things smaller" on 20<sup>th</sup> November 2021. The main objective of TED-TALK was to lightened up the students about "Nanotechnology is the future of all technologies". It is a platform that includes biology, electronics, chemistry, physics, materials science and engineering. Although nanotechnology is the study of ultra-small structures, it not simply about making things smaller for the sake of it. It is because the game of science has different rules when you play it in the nanoscale.

Nearly every other year the transistors that power silicon computer chip shrink in size by half and double in performance, enabling our devices to become more mobile and accessible. Nanostructure materials have various applications in diverse fields such as health, energy and environmental applications.

All the faculties of Physics department were also attend the TED-TALK along with the students. At the end of the TED-TALK, queries asked by the students were answered by the senior faculty members of the department.
